NWT Base Case Oil and Gas Activity Forecast 2007-2016

Project Summary:

An experts Delphi Panel was used, along with primary research to develop five and 10 year estimates of scheduled oil and gas industry activity incremental to the MGP. The forecasts estimate industry activity for geological and geophysical programs (2D and 3D seismic), exploration drilling and development programs. Forecasts are provided for three main industry operating areas in the region: the Mackenzie Delta Beaufort region settled by the Inuvialuit and Gwich'in people; the central Mackenzie Valley region settled by the Sahtu Dene and Metis; and the southern Mackenzie Valley settled by the Dehcho First Nations.

Services Provided:

- * Project concept, management and execution
- * Research and forecasting
- * Report drafting

Deliverables or Results:

- * The first comprehensive NWT oil and gas activity forecast widely recognized by leading experts.
- * A comprehensive forecast of NWT oil and gas activity.
