Exploration and drilling

Project Summary:

IEL is currently undertaking an assessment of environmental governance and management systems in oil producing countries.

Services Provided:

The specific purpose of the project is:

- To establish the key elements of the environmental management, or governance, system and develop a benchmark template which a government of an oil and gas producing gas producing country should have in place;
- To survey a number of petroleum producing countries and review country performance against the benchmark standard;
- To determine the most common problems in establishing an adequate environmental governance system in developing countries; and
- To propose recommendations that could guide Bank assistance to overcome these problems.

Deliverables or Results:

The specific deliverables of the project include:

- Template of key elements of environmental governance;
- Survey questionnaire using a web-based survey program such as Survey Monkey;
- Tabulation and preliminary results of the survey
- Consultations with companies and governments
- Workshop
- Final Report
